PROFILE SUMMARY

Full Stack Developer with 2 years of experience building production multi-tenant SaaS, CRM, and e-commerce applications using the MERN stack and MySQL. Skilled in RESTful API design, SQL schema design, JWT authentication, RBAC, payment gateway integration, and real-time features with Socket.io. Career goal: to build scalable, secure web applications as a Full Stack Developer in a collaborative Agile team.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, SQL, HTML5, CSS3
Frontend: React.js, Redux, React Hooks, Bootstrap, Responsive Design, Formik, Socket.io Client
Backend: Node.js, Express.js, RESTful APIs, Knex.js, Socket.io, Webhooks, Nodemailer, gRPC, node-cron, node-schedule
Authentication & Validation: JWT, bcrypt, Google OAuth, Zod, express-validator, RBAC
Databases: MySQL, MongoDB, SQL, Database Schema Design, Migrations
Payments & Integrations: Razorpay, Stripe, PayPal
Tools & Libraries: Git, GitHub, Postman, Cloudinary, Puppeteer, Winston, Multer, Helmet, Speakeasy, Agile/Scrum
Core Competencies: Full Stack Development, Multi-Tenant Architecture, RESTful API Design, Payment Gateway Integration, Real-Time Applications

PROFESSIONAL EXPERIENCE

Full Stack Developer | Gnxtace | Nov 2024 – Present

- Build and maintain 3 production SaaS products (multi-tenant billing, CRM, and e-commerce) as a Full Stack Developer, delivering 100+ RESTful API endpoints with Node.js, Express.js, and MySQL.
- Own features across the software development lifecycle: database schema design (226 Knex migrations), REST API implementation, React.js frontend integration, deployment, and production maintenance; ship releases in bi-weekly Agile sprints.
- Maintain production code quality using request/schema validation (Zod, express-validator), role-based access control (RBAC), JWT authentication, and structured logging with Winston.

PROJECTS

Multi-Tenant Payment & Project Management SaaS | Node.js, Express.js, MySQL, Knex.js, Socket.io, Razorpay, Stripe, PayPal, gRPC

- Designed a multi-tenant backend with 60+ REST API modules for invoices, payments, projects, documents, and subscriptions, using tenant-scoped joins and pagination to isolate tenant data.
- Implemented layered authentication with JWT access and refresh tokens, bcrypt, Google OAuth, TOTP-based two-factor authentication (Speakeasy), encrypted 2FA secrets, password-reset enforcement, and MFA recovery codes.
- Integrated Razorpay, Stripe, and PayPal for subscription lifecycle workflows, including trials, upgrades, and renewals; generated PDF invoices with Puppeteer and supported transactional email retries and delivery audit logs.
- Built bank reconciliation workflows using CSV/PDF parsing and transaction matching against invoices, with profit-and-loss reporting and capital-flow tracking; maintained a relational schema through 226 Knex migrations.

CRM & Lead Management SaaS | Node.js, Express.js, MySQL, Knex.js, Socket.io, node-schedule, Nodemailer

- Developed 24 controller modules for leads, deals, tasks, and phone/message logs, using Knex pagination and moment-timezone for multi-region date normalization in reports.
- Implemented a webhook registration workflow that creates a Lead Source in a database transaction and coordinates remote API registration, with failure handling to maintain form-to-webhook mapping.
- Applied security middleware including Helmet headers, route-level rate limiting (20 requests per 15 minutes on /auth/login), JWT authentication, startup environment-variable validation, and Multer file uploads.

Multi-Vendor Food & E-Commerce Platform | Node.js, Express.js, MySQL, Stripe, Cloudinary, Socket.io, Google OAuth

- Built 45+ REST APIs for products, orders, cart, gift cards, promo codes, and newsletters, with SEO-friendly slugs and paginated product listing and filtering.
- Implemented Stripe payment processing with raw-body webhook signature verification, gift-card redemption, promo-code usage limits, and branded order confirmation emails via Nodemailer.
- Enabled real-time customer/vendor order tracking with Socket.io, integrated Cloudinary for image storage and transformation, and scheduled newsletter campaigns with node-cron; configured structured rotating logs with Winston.

EDUCATION

B.E. Mechanical Engineering | Ganesh College of Engineering, Salem | CGPA: 7.53 | 2017–2021

CERTIFICATION

Full Stack Development | GUVI Institute | Apr 2024 – Jun 2024
